DETAILED ACTION

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 22-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Peterson et al. (US 5683143).

Peterson et al. discloses a protective wear sleeve (35) comprising an elongate body having an axial forward end and an axial rearward end; the elongate body having a solid enlarged diameter portion (37) adjacent to the axial forward end thereof and a split portion (51) beginning at and extending in an axial forward direction from the rearward end wherein the split portion contains a slot so that the split portion is flexible in a radial direction, and a solid intermediate portion being between and contiguous with the enlarged diameter portion and the split portion; the split portion having an external surface that is uniform over the entire length thereof and the intermediate portion having an external surface that is uniform wherein the diameter of the external surface of the split portion is equal to the diameter of the surface of the intermediate portion.

Response to Arguments

3. Applicant's arguments filed 1/05/05 have been fully considered but they are not persuasive. Applicant argues that Peterson et al. does not teach a sleeve wherein the

Art Unit: 3673

external surface of the split portion is "biased in a radial outward direction". It should be noted that applicant is claiming only a sleeve and not the sleeve in combination with its holder. That being said applicant's sleeve meets the "biased in a radial outward direction" by structurally having a slit and being made out of metal. The Peterson et al. sleeve also has the same structure thus meeting the "biased in a radial outward direction" limitation. In other words if the sleeve of Peterson et al. were being placed in a bore (slightly smaller than the sleeve), the sleeve would be squeezed (meaning still in it's elastic stage) inwardly by the walls of the bore while at the same time the sleeve would inherently try to rebound to it's initial position, thus meeting the "biased in a radial outward direction" limitation.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
